Welcome to "Bon Courage Les Anglais", where we seek to "open the shutter" to allow a glimmer of light to shine on the life of those who live there. We were two uninitiated "Anglais"; Christine, who could fortunately speak almost fluent French, and Peter, who initially struggled to string a sentence together. Our little book chronicles the many heart-warming, often funny, sometimes life-changing experiences that we and our French neighbours shared together. They record the ups and downs, the achievements and heartbreaks, the triumphs and mistakes of those incredible years. They seek to share the everyday acts of neighbourliness, kindness and practical support, and

the love that underpinned all of these. They show a way of life echoing shades of fifty years ago, that we look back on nostalgically here in England.

This book presents a geometric theory of complex analytic integrals representing hypergeometric functions of several variables. Starting from an integrand which is a product of powers of polynomials, integrals are explained, in an open affine space, as a pair of twisted de Rham cohomology and its dual over the coefficients of local system. It is shown that hypergeometric integrals generally satisfy a holonomic system of linear differential equations with respect to the coefficients of polynomials and also satisfy a holonomic system of linear difference equations with respect to the exponents. These are deduced from Grothendieck-Deligne's rational de Rham cohomology on the one hand, and by multidimensional extension of Birkhoff's classical theory on analytic difference equations on the other.

We talk not only of enjoying music, but of understanding it. Music is often taken to have expressive import--and in that sense to have meaning. But what does music mean, and how does it mean? Stephen Davies addresses these questions in this sophisticated and knowledgeable overview of current theories in the philosophy of music. Reviewing and criticizing the aesthetic positions of recent years, he offers a spirited explanation of his own position. Davies considers and rejects in turn the positions that music describes (like language), or depicts (like pictures), or symbolizes (in a distinctive fashion) emotions. Similarly, he resists the idea that music's expressiveness is to be explained solely as the composer's self-expression, or in terms of its power to evoke a response from the audience. Music's ability to describe emotions, he believes, is located within the music itself; it presents the aural appearance of what he calls emotion characteristics. The expressive power of music awakens emotions in the listener, and music is valued for this power although the responses are sometimes ones of sadness. Davies shows that appreciation and understanding may require more than recognition of and reaction to music's expressive character, but need not depend on formal musicological training.
