The purpose of this edition, like that of the earlier ones, is to provide the basis for a deeper understanding of the structures of organic compounds and the mechanisms of organic reactions. The level is aimed at advanced undergraduates

graduate students.
Our goals are to
solidify the
student's
understanding of
basic concepts
provided by an
introduction to
organic chemistry
and to present
more information
and detail,
including

quantitative information, than can be presented in the first course in organic chemistry. The first three chapters consider the fundamental topics of bonding theory, stereochemistry, and conformation.

Chapter 4

discusses the techniques that are used to study and characterize reaction mechanisms.

Chapter 9 focuses on aromaticity and the structural basis of aromatic stabilization. The remaining chapters consider basic reaction types,
