An Architecture For Autism Concepts Of Design

Architectural Design for Autism. The deficiencies that people with autism possess determine numerous social and educational problems. Most often, they are caused by sensory and perception difficulties that induce states of indifference or panic and anxiety. Only through the manipulation of space and the surrounding elements there can be created circumstances that offer comfort and safety to the patient, things necessary for people with autism to understand and learn from the external inputs.

Architectural Design for Autism « Architecture for Autism

Architecture, as a profession, is responsible for creating environments that accommodate the needs of all types of users. Special needs individuals should not be exempt from such accommodation. Despite this high incidence of autism, there are yet to be developed architectural design guidelines catering specifically to the scope of autistic needs.
