ASM Handbook Volume 14B on sheet forming is the second of two volumes on metalworking technology, following the publication of Volume 14A on forging and bulk forming in 2005. These two volumes reflect the continuing mission of the ASM Handbook series to provide in-depth and practical engineering knowledge in areas of technological significance.

The new ASM Handbook, Volume 11: Failure Analysis and Prevention has been revised from its 2002 and 1986 editions with the goal to provide the "go-to" reference for those confronted with the failure of a machine or component.

These volumes cover the properties, processing, and applications of metals and nonmetallic engineering materials. They are designed to provide the authoritative information and data necessary for the appropriate selection of materials to meet critical design and performance criteria.

This reference book makes it easy for anyone involved in materials selection, or in the design and manufacture of metallic structural components to quickly screen materials for a particular application. Information on practically all ferrous and nonferrous metals including powder metals is presented in tabular form for easy review and comparison between different materials. Included are chemical compositions, physical and mechanical properties, manufacturing processes, applications, pertinent specifications and standards, and test methods. Contents Overview: Glossary of metallurgical terms Selection of structural materials (specifications and standards, life cycle and failure modes, materials properties and design, and properties and applications) Physical data on the elements and alloys Testing and inspection Chemical composition and processing characteristics

Comprehensive and complete, this handbook is a practical, one-volume reference to working formulas and equations for practicing mechanical engineers. Thousands of key equations, constants and diagrams are brought together to simplify calculations.

These volumes cover the properties, processing, and applications of metals and nonmetallic engineering materials. They are designed to provide the authoritative information and data necessary for the appropriate selection of materials to meet critical design and performance criteria.

A comprehensive reference on the properties, selection, processing, and applications of the most widely used nonmetallic engineering materials. Section 1, General Information and Data, contains information applicable both to polymers and to ceramics and glasses. It includes an illustrated glossary, a collection of engineering tables and data, and a guide to materials selection. Sections 2 through 7 focus on polymeric materials—plastics, elastomers, polymer-matrix composites, adhesives, and sealants—with the information largely updated and expanded from the first three volumes of the Engineered Materials Handbook. Ceramics and glasses are covered in Sections 8 through 12, also with updated and expanded information. Annotation copyright by Book News, Inc., Portland, OR
