Biotechnology engineering is an undergraduate degree programme in applied sciences that amalgamates the facts from both Biological sciences and technology. This study utilizes the biological processes which include the study of microorganisms or knowledge of antibiotics and further implement them in various industrial purpose.

Biotechnology Engineering - Courses, Subjects, Eligibility ...

Your aim as a biotechnology engineer is to harness biological systems as a way of producing new products. You'll need to get into the nitty-gritty of how biological processes occur and find ways to adapt, alter, change and control how they function.

Biotechnology Engineering in day-to-day life | AllAboutCareers

Biotechnology Engineering is a combination of engineering, chemistry, genetics, bio-chemistry and microbiology. Biotechnology Engineering applies in the field of animal husbandry, agriculture, energy production and conservation, pollution control, disease research, eco-conservation, and research and development of medicines, vaccines, fertilizers and insecticides.

Biotechnology Engineering: Courses, Jobs, Salary, Books

Genetic engineering underpins practically every aspect of modern biotechnology. This course aims at familiarizing students with the current methods of DNA manipulation and practical applications of recombinant DNA technology, including the use of vectors, construction of libraries, PCR, restriction digests, mapping, and cloning.
