Cognitive behavioral therapy (CBT) has become the leading treatment for anxiety, and with good reason. Research indicates that CBT can be an effective treatment for anxiety after as few as 8 sessions, with or without any form of medication (4). Due to the high prevalence of anxiety disorders (18% of adults in the United States meet criteria for an anxiety disorder over a 1-year period [3]), it's valuable to have a strong understanding of best practices for its treatment.
