AIDS is the second-leading cause of death among African American women between the ages of 18 and 44. African American women constitute 63% of all cases of AIDS among women in the United States. Gathering the collective wisdom of scholars, researchers, and social work professionals, this volume focuses on the primary population of women impacted by AIDS, presenting culturally sensitive responses that meet the specific needs of African American women.

A New York Times bestseller Named a Best Book of 2020 by the Australian Book Review, AV Club, Books-a-Million, Electric Literature, Esquire, the Financial Times, Good Housekeeping (UK), The Guardian, Kirkus Reviews, Literary Hub, the New Statesman, the New York Public Library, NPR, the Star Tribune, and TIME Marilynne Robinson, winner of the Pulitzer Prize and the National Humanities Medal, returns to the world of Gilead with Jack, the latest novel in one of the great works of contemporary American fiction Marilynne Robinson's mythical world of Gilead, Iowa—the setting of her novels Gilead, Home, and Lila, and now Jack—and its beloved characters have illuminated and interrogated the complexities of American history, the power of our emotions, and the wonders of a sacred world. Jack is Robinson's fourth novel in this now-classic series. In it, Robinson tells the story of John Ames Boughton, the prodigal son of Gilead's Presbyterian minister, and his romance with Della Miles, a high school teacher who is also the child of a preacher. Their deeply felt, tormented, star-crossed interracial romance resonates with all the paradoxes of American life, then and now. Robinson's Gilead novels, which have won one Pulitzer Prize and two National Book Critics Circle Awards, are a vital contribution to contemporary American literature and a revelation of our national character and humanity.

The history of patent harmonization is a story of dynamic actors, whose interactions with established structures shaped the patent regime. From the inception of the trade regime to include intellectual property (IP) rights to the present, this book documents the role of different sets of actors – states, transnational business corporations, or civil society groups – and their influence on the structures – such as national and international agreements, organizations, and private entities – that have caused changes to healthcare and access to medication. Presenting the debates over patents, trade, and the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS Agreement), as it galvanized non-state and nonbusiness actors, the book highlights how an alternative framing and understanding of pharmaceutical patent rights emerged: as a public issue, instead of a trade or IP issue. The book thus offers an important analysis of the legal and political dynamics through which the contest for access to lifesaving medication has been, and will continue to be, fought. In addition to academics working in the areas of international law, development, and public health, this book will also be of interest to policy makers, state actors, and others with relevant concerns working in nongovernmental and international organizations.

This textbook introduces students to the strategic communication methods that are crucial to master in order to develop into effective and ethical managers at all levels of business. Effective communication skills are necessary for success in the business world, and O'Rourke has written a highly readable book filled with anecdotes and examples to engage students in the learning process. This edition includes several classic and new features: The strategic approach is integrated throughout the book, allowing students to understand how a communicated message impacts the business as a whole. Case studies throughout the book provide students with hands-on experience of scenarios they will encounter in the real world. The book includes at least three dozen fresh, classroom-tested cases. An ethical thread is woven through the text, demonstrating how ethical decision making can be applied in all aspects of communication. Separate chapters on technology (including social media), intercultural communication, nonverbal communication and conflict management provide students with the skills to building relationships and influencing stakeholders; key skills for any manager. A companion website includes comprehensive support material to teach this class, making Management Communication a complete resource for students and instructors.

In Dynamics of Teaching and Learning Modern Hebrew, Yona Gilead's original research into classroom interactions, offers a thick description of a successful beginner-level Modern Hebrew program at an Australian university, thus offering a model for renewed interest in Hebrew L2 research.

Equity and Access attempts to unravel the complex narrative of why inequities in the health sector are growing and access to basic health care is worsening, and the underlying forces that contribute to this situation. It draws attention to the way globalization has influenced India's development trajectory as healthcare issues have assumed significant socio-economic and political significance in contemporary India. The volume explains how state and market forces have progressively heightened the iniquitous health care system and the process through which substantial burden of meeting health care needs has fallen on the individual households. Twenty-eight scholars comprising social scientists, medical experts, public health experts, policy makers, health activists, legal experts, and gender specialists have delved into the politics of access for different classes, castes, gender, and other categories to contribute to a new field "health care studies" in this volume. Adopting an interdisciplinary approach within a broader political-economy framework, the volume is useful for understanding power relations within social groups and complex organizational systems.

This inaugural edited collection for the Communicating Responsible Diversity, Equity, and Inclusion series explores the active promotion of diversity, equity, and inclusion as a public relations responsibility and provides new avenues for critiquing the ways in which power operates through public relations work and theory building.

Provides a detailed overview of the best business schools across North America, including information on each school's academic program, competitiveness, financial aid, admissions requirements, and social scenes.

Sickle cell disease (SCD) is a genetic condition that affects approximately 100,000 people in the United States and millions more globally. Individuals with SCD endure the psychological and physiological toll of repetitive pain as well as side effects from the pain treatments they undergo. Some adults with SCD report reluctance to use health care services, unless as a last resort, due to the racism and discrimination they face in the health care system. Additionally, many aspects of SCD are inadequately studied, understood, and addressed. Addressing Sickle Cell Disease examines the epidemiology, health outcomes, genetic implications, and societal factors associated with SCD and sickle cell trait (SCT). This report explores the current guidelines and best practices for the care of patients with SCD and recommends priorities for programs, policies, and research. It also discusses limitations and opportunities for developing national SCD patient registries and surveillance systems, barriers in the healthcare sector associated with SCD and SCT, and the role of patient advocacy and community engagement groups.
