This book provides an introduction to a range of fundamental questions that have taxed evolutionary biologists and ecologists for decades. All of the questions posed have at least a partial solution, all have seen exciting breakthroughs in recent years, yet many of the explanations have been hotly debated.

A common tendency in the field of population ecology has been to overlook individual differences by treating populations as homogeneous units; conversely, in behavioral ecology the tendency has been to concentrate on how individual behavior is shaped by evolutionary forces, but not on how this behavior affects population dynamics. Adam Lomnicki and others aim to remedy this one-sidedness by showing that the overall dynamical behavior of populations must ultimately be understood in terms of the behavior of individuals. Professor Lomnicki's wide-ranging presentation of this approach includes simple mathematical models aimed at describing both the origin and consequences of individual variation among plants and animals. The author contends that further progress in population ecology will require taking into account individual differences other than sex, age, and taxonomic affiliation--unequal access to

Get Free Lion King Ecology Questions Answer

resources, for instance. Population ecologists who adopt this viewpoint may discover new answers to classical questions of population ecology. Partly because it uses a variety of examples from many taxonomic groups, this work will appeal not only to population ecologists but to ecologists in general.

Adds to the debate surrounding the green movement and the connections between society, nature, and science, suggesting that structural changes in economic systems, lifestyles, and values are the answer to ecological problems

The gap between environmental philosophy and everyday environmental politics is considered in this volume. It puts forward a theory of environmental protection, binding together being environmental friendly with democracy and socialism.

You've heard of sacred places, writings, relics, and rituals, holy days and magical times of year. But these are actually representations of relationships that people have with each other and the elements of the world. Some of these relationships environmental: they involve landscapes, animals, and the streets of your home town. Some are personal, such as families, friends, and elders. Some are public, involving musicians, storytellers, medical doctors, and even soldiers. This book studies twenty-two relationships, from a variety of traditions, and shows their place in 'the good life'. Yet these relations are always fragile, and threatened by fears, from the fear of loneliness, to the fear of the loss of personal or political freedom, to the fear of death. To escape from these fears, people often trap themselves into ways of life that are bad for everyone, including themselves. This book studies how that happens, and how to prevent it. More than beliefs, laws, and teachings, our relationships are the true basis of spirituality, and freedom.

" W. T. Edmondson has spent his career answering questions about the ecological impacts of human experiments on lakes in Washington State. In this volume, he recounts these studies and captures from his experiences a larger view of the nature of our environmental problems.... While the commentary is wide ranging, the foundation is a personal account of one ecologist's lifetime experience on the dual points of research and public application of that research."--Research and Exploration"W. T. Edmondson, a zoologist, extracts enduring lessons from his more than 50 years of experience in persuading political powers to make use of scientific knowledge when they set about drawing up laws for managing human interventions in the environment. Any scientist who follows in Edmondson's footsteps should benefit from reading this sensitive recounting of political battles."--Garrett Hardin, Pacific Northwest Quarterly

"Environmentally Conscious Design has become a major interest of architects, designers, planners, public officials, and industry leaders around the world. Unlike other books on the subject that focus on only one or another aspect of ecological design, The Ecology of Architecture answers the question, How do we design and build ecologically sound and affordable structures today that will perform well tomorrow? Written by an experienced practitioner in the field, the book details all facets of green building by providing comparative energy performance solutions, recycling alternatives, cost considerations, materials analyses, information on legislation, as well as examples of practical applications."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. This volume is a madcap collection of personal and academic writing ranging in topics such as theater, politics, futuresports, and more. Perhaps most importantly it chronicles the development of a new type of performance art: Gonzo Theater.

This volume, which originally appeared as a special issue of TDR/The Drama Review, looks at puppets, masks, and other performing objects from a broad range of perspectives. Puppets and masks are central to some of the oldest worldwide forms of art making and performance, as well as some of the newest. In the twentieth century, French symbolists, Russian futurists and constructivists, Prague School semioticians, and avant-garde artists around the world have all explored the experimental, social, and political value of performing objects. In recent years, puppets, masks, and objects have been the focus of Broadway musicals, postmodernist theory, political spectacle, performance art, and new academic programs, for example, at the California Institute of the Arts.This volume, which originally appeared as a special issue of TDR/The Drama Review, looks at puppets, masks, and other performing objects from a broad range of perspectives. The topics include Stephen Kaplin's new theory of puppet theater based on distance and ratio, a historical overview of mechanical and electrical performing objects, a Yiddish puppet theater of the 1920s and 1930s, an account of the Bread and Puppet Theater's Domestic Resurrection Circus and a manifesto by its founder, Peter Schumann, and interviews with director Julie Taymor and Peruvian mask-maker Gustavo Boada. The book also includes the first English translation of Pyotr Bogatyrev's influential 1923 essay on Czech and Russian puppet and folk theaters. Contributors John Bell, Pyotr Bogatyrev, Stephen Kaplin, Edward Portnoy, Richard Schechner, Peter Schumann, Salil Singh, Theodora Skipitares, Mark Sussman, Steve Tilllis

Offers an introduction to ecology, followed by an examination of global warming and species extinction.
