"[McCormick has] been face-to-face with Ebola in Africa.... He... worked for days inside a mud hut that was smeared with Ebola blood, on his knees among people who were crashing and bleeding out."

—Richard Preston, *The Hot Zone Now* with a new foreword by the authors about the novel Coronavirus pandemic. Sublimely equipped to survive, to propagate, to conquer, the virus is neither really alive nor really dead. Its dimensions are measured in molecules. It attacks by dismantling its human targets cell by cell. An ancient adversary, resident on this earth long before our evolutionary ancestors arrived, the virus is without conscience or compassion, without mind. It enjoys the advantages of countless numbers and infinite time. It is a being almost too simple to understand and

too basic to outwit. We are locked in a war with the virus. Each battle kills some of us. The battles have many names: Ebola, Lassa fever, Crimean Congo Hemorrhagic Fever, AIDS . . . Dr. Joseph McCormick and Dr. Susan Fischer-Hoch have met them all; and they have fought them all. Level 4: Virus Hunters of the CDC is their story. It is an intense, personal account of more than a quarter of a century on the front lines—in the ultra high-tech "hot zone" lab that McCormick was instrumental in creating at the Centers for Disease Control in Atlanta, as well as in the most primitive places on the planet, where the local climate, terrain, and politics can kill as easily as any disease. In the villages of Zaire and Sudan, the ghettos and rain forest of Brazil, and the nomadic settlements of northern Pakistan, the cutting edge of science meets the deadly universe of viral disease. The elite corps of virus hunters who dare to penetrate these realms combine

the unquenchable curiosity and raw guts of intrepid explorers with the training of top-level scientists, the hunch-playing passion of master sleuths, and the compassion of truly great physicians. Told in intimate detail by two of the world's best-known virologists—colleagues, collaborators, husband and wife— Level 4 is a journey across the world and into many strange new worlds: from the seductive beauty of equatorial Africa—a limitless reservoir of infection—to the confines of the all-but-invisible field of the electron microscope. While other books have offered hot zones, sick monkeys, and grim statistics, Level 4 brings home from the world of the virus the human stories of those who lived, and those who died.

its infancy when it was largely a documentation of epidemics. It has now evolved into a dynamic phenomenon involving the ecology of the infectious agent, pathogenesis in the host, reservoirs and vectors, as well as the complex mechanisms concerned in the spread of infection and the extent to which this spread occurs. Rapid globalization has led to unprecedented interest in infectious diseases worldwide and their effect on complex population dynamics including migration, famine, fire, war, and terrorism. It is now essential for public health officials to understand the basic science behind infectious disease and, likewise, students studying ID must have a broader understanding of the implications of infectious disease in a public health context as well as clinical presentation and prevention. The clear demand for an integrated approach has led to the publication of this text. Check out the

Infections with recognized and putative species of the genus pestivirus are not host-specific and are documented in many wildlife species. The study of pestivirus infections in wildlife species is important both to eradication programs and programs for maintaining the health and well-being of wildlife populations. Free-ranging wildlife species may act as reservoirs for pestiviruses that infect domestic species. For this reason, eradication efforts for classical swine fever virus include control of the virus in wild boar populations. The contribution of free-ranging species to the circulation of BVDV1, BVDV2, and BDV is less well understood. While substantial damage due to pestivirus infections has been demonstrated in a few specific wildlife populations, the impact of pestiviral

infections on the well-being of most captive and free-ranging wildlife populations is largely unknown. The research topics summarizes our current understanding of pestiviral infections in wildlife and discusses the challenges in understanding and mediating their impact on captive and free ranging wildlife species.

Recent epidemics have prompted large-scale international interventions, aimed at mitigating the spread of disease in a globalized world. During a crisis, however, global health actions – including planning and organizing, communicating about risk, and cost – benefit evaluations – aren't usually part of a single, integrated global response. Arguing that an uncoordinated approach can be challenged by local conditions and expectations, generating a wide range of resistance and difficulties, this volume provides important insights for

future outbreak management and global health governance. Drawing on experiences with A(H1N1) and Ebola virus disease, the book is divided into three parts looking at how responses to global health crises have developed, lessons learned from particular pandemics and the ethical implications of our management of them. Individual chapters focus on, among other issues, financing, cost – benefit analysis, matrix management, risk communication and organizational strategies. Taking a social science perspective, this valuable book outlines the current state of global health emergency responses and explores ways in which they can be improved. It is a useful read for academics and practitioners interested in global health, the sociology of health and illness, health economics and emergency management.

During the last twenty years, the interest in public health leadership has continued to increase with the need to strengthen the infrastructure of public health, the events of September 11, 2001, the health reform movement, and scientific breakthroughs. The increasing role for primary care programs in the public health agenda, and the increasing deficit at the federal, state, and local level. In five parts, this book explores the basic theories and principles of leadership and then describes how they may be applied in the public health setting. Leadership skills and competencies, as well as methods for measuring and evaluating

After experiencing the SARS outbreak in 2003, Hong Kong, Singapore, and Taiwan all invested in various techniques to mitigate future pandemics involving myriad cross-species interactions between humans and birds. In some locations microbiologists allied with veterinarians and birdwatchers to follow the mutations of flu viruses in birds and humans and create preparedness strategies, while in others, public health officials worked toward preventing pandemics by killing thousands of birds. In *Avian Reservoirs* Frédéric Keck offers a comparative analysis of these responses, tracing how the anticipation of bird flu pandemics has changed relations between

birds and humans in China. Drawing on anthropological theory and ethnographic fieldwork, Keck demonstrates that varied strategies dealing with the threat of pandemics—stockpiling vaccines and samples in Taiwan, simulating pandemics in Singapore, and monitoring viruses and disease vectors in Hong Kong—reflect local geopolitical relations to mainland China. In outlining how interactions among pathogens, birds, and humans shape the way people imagine future pandemics, Keck illuminates how interspecies relations are crucial for protecting against such threats.

This book will provide an overview of how to manage patients with lymphoma in the format of a series of engaging case studies. Lymphomas are cancers that originate in the lymphatic system. There are two main types of lymphoma: Hodgkin lymphoma and non-Hodgkin lymphoma. These lymphomas

comprise various subtypes with prognosis and treatment depending on the stage and type of the cancer. Lymphoma is a major global health problem; non-Hodgkin lymphoma in particular is the tenth most common type of cancer worldwide. In response to this there have been a number of significant advances in the available treatment options for lymphoma with new breakthrough drugs being approved or registered for approval. In light of this, this case study book will be an extremely timely guide for all hematologists, oncologists, and healthcare professionals wishing to keep up-to-date with these recent developments. The format of this book is also particularly appealing as it offer readers a practical approach to the clinical management of patients with these conditions as suggested by leading physicians from the City of Hope National Medical Center in California, USA in an era of vast therapeutic development.
