The Capital you need in a piggery business will rely on what type of operation are you going to pursue. So if you are ready. Let's do it! Feeding Program: Feed Cost. 70-80 percent (the highest expense on your pig farm) of the total cost of production is spent on feeds if pure commercial feeds are used. According to Dr. Virgie N. Callo-Etis.

Air Emissions from Animal Feeding Operations: Current Knowledge, Future Needs discusses the need for the U.S. Environmental Protection Agency to implement a new method for estimating the amount of ammonia, nitrous oxide, methane, and other pollutants emitted from livestock and poultry farms, and for determining how these emissions are dispersed in the atmosphere. The committee calls for the EPA and the U.S. Department of Agriculture to establish a joint council to coordinate and oversee short - and long-term research to estimate emissions from animal feeding operations accurately and to develop mitigation strategies. Their recommendation was for the joint council to focus its efforts first on those pollutants that pose the greatest risk to the environment and public health.

According to surveys, the public believes the chickens it is buying are wholesome. Poultry Inspection: The Basis for a Risk-Assessment Approach looks at current inspection procedures to determine how effective the Food Safety Inspection Service is in finding dangerous levels of contaminants and disease-producing microorganisms. The book first describes the history behind the current system, noting that the amount of poultry inspected has increased dramatically while techniques and regulations have remained constant since 1968. The steps involved in an inspection are then described, followed by a discussion of alternative and innovative inspection procedures. It then provides a risk-assessment model for poultry, including submodels for each stage of processing. Risk assessment is used to protect health, establish priorities, identify problems, and set acceptable levels of risk. The model is applied both to microbiological hazards and to chemical contaminants.

Farming is a business, as well as a way of life. Whole Farm Management is a comprehensive guide developed by the Small Farms Program at Oregon State University to help aspiring and beginner farmers make smart business decisions to ensure lasting success. In clear, accessible language, this book covers every essential step, from developing a strategic plan to acquiring equipment, establishing infrastructure, finding markets, budgeting, managing day-to-day operations, and selecting a business structure for long-term viability. The emphasis throughout is on using sustainable agricultural systems

and managing the whole farm, whether raising grass-based livestock, perennial food crops, or annual crops such as flowers. Case studies of successful farms, along with guidance and solutions to common problems from long-time farmers, round out this essential handbook.

The domestic pig is perceived as an animal with intelligence and character and yet, in the industrialized world, the majority of people have had little or no contact with them. Pigs are subject to a wide range of environments from the tropics to the sub-arctic, ranging from small-scale, extensive systems to large-scale intensive systems. They may spend their whole life on one farm or may be subject to long-distance transport multiple times. Not surprisingly, many aspects of their life experiences can impact their welfare. This book brings together a team of leading pig welfare research scientists to review the natural history of the pig, the welfare of pigs at different stages of life and to indicate what the future holds in terms of pig welfare. The text is aimed at researchers and teachers working in veterinary and animal science together with those working in the pig industry and for governmental and non-governmental animal welfare organizations.

This book guides readers through a very comprehensive, step-by-step process to produce professional-quality business plans to attract the financial backing entrepreneurs need, no matter what their dream.

Given the current worsening of the African swine fever situation worldwide, this field manual will be aimed to assist veterinarians in the prompt recognition and detection of the disease and the immediate control steps at farm level.

A joint FAO and World Bank study which shows how the farming systems approach can be used to identify priorities for the reduction of hunger and poverty in the main farming systems of the six major developing regions of the world.

The 2006 Livestock Report Highlights critical issues that arise from the globalisation of the Livestock sector. It is the first of a series that aims to stimulate broad debate, and to this end it covers a wide spectrum of topics. Five papers take a global perspective on various topics (including the management of transboundary animal diseases, the future of small-scale dairying, animal genetic resources...) and one takes a snapshot of the Asian region. (Also available in French and Spanish).

Dietary habits of people have changed over the last few decades. Growing consciousness for protein rich food has given an impetus to both the dairy industry and poultry farming. Today, the dairy industry is a large organized sector with both private and government participation whereas poultry farming has indicated a rapid growth of 20% in the past few decades as well. Poultry is one of the fastest growing segments of the agricultural sector in India today. The production of agricultural crops has been rising at a rate of 1.5 to 2 % per annum that of eggs and broilers has been rising at a rate of 8 to 10 % per annum. From a backyard hobby it has culminated into an industry. The venture has largely been entrepreneurial and poultry farmers prefer to target their efforts to breeding & broiler farming for sale of ready broilers or layer farming for eggs. Poultry is the second most widely eaten meat in the world, accounting for about 30% of meat production worldwide. Dairy plants process the raw milk they receive from farmers so as to extend its marketable life. India has only a few specialized dairy farms. It is the production that characterizes the dairy industry. India is the worlds highest milk producer and all set to become the worlds largest food factory. Dairying is an important source of subsidiary income to small/marginal farmers and agricultural labourers. The manure from animals provides a good source of organic matter for improving soil fertility and crop yields. Since agriculture is mostly seasonal, there is a possibility of finding employment throughout the year for many persons through dairy farming. Thus, dairy also provides employment throughout the year. The main beneficiaries of dairy programmes are small/marginal farmers and landless labourers. Developments in the dairy and poultry industries during the last decade have been important enough to bring out a considerable amount of materials on dairy and poultry farming; processing of milk and poultry related products. The major contents of the book are dairy farming, poultry production, breeding, fertility, forage grass and concentrates, cow behaviour and health, manufacture of butter and cheese, process measurements and controls, components of poultry diets etc. This book also describes about the feed manufacturing process, butter and cheese manufacturing processes with diagrams, housing system and management of broilers and more. The first book of its kind which covers complete details of dairy and poultry farming, processing how to feed cows, birds in dairy and poultry, kind of diseases and their cure and other information related farming. This book will be an invaluable resource to dairy and poultry technology, institutions and for those who want to venture in this field.
