The chapters in the Study Guide mirror the chapters in the textbook. Multiple choice, matching, true-false, fill-in-the-blank, and completion questions; there are over 1,200 question in all. Apply What You Know sections encourage critical thinking and application of core content. Crossword puzzles, word scrambles, and other similar "mind-testers" make learning basic anatomy and physiology fun. Did You Know sections include factual tidbits that will engage and interest students. Topics for review tell the student what to review in the textbook prior to beginning the exercises in the study guide. All the answers for each section are located in the back of the study guide. The Evolve Logo and web address are added within each chapter to direct students to further online activities. Each chapter will be updated to include revised content in the core textbook. Addition of new Case Studies for each chapter.

Male Reproductive Function gives an up-to-date review on the physiology and disease processes associated with the male reproductive system. The first few chapters describe the regulation of the functions of the testis and the integration of its components: germ cells, Sertoli cells and Leydig cells. This is followed by a description of puberty and aging, and the disorders or dysfunction that may be associated with these physiological processes. Discussions on the current methods for the diagnosis and treatment of male hypogonadism, male infertility and male sexual dysfunction follow, with detailed descriptions of types of androgen replacement and the benefits and risks of such treatment. The book concludes with the development of male contraception and the possible influence of the environment on the male reproductive system. Male Reproductive Function represents a conglomeration of the efforts of experts in andrology from all over the world, both in basic cellular/molecular biology as well as in clinical science and practice. This book is suitable for endocrinologists, urologists, general internists, gynecologists and other students in the field of male reproduction.
