Revision Notes For The Respiratory Medicine Specialty ...

The heart structure. The heart is labelled as if it was in the chest so what is your left on a diagram is actually the right-hand side (and vice versa) . The right side of the heart receives deoxygenated blood from the body and pumps it to the lungs where oxygen diffuses in from the alveoli and carbon dioxide diffuses out; The left side of the heart receives oxygenated blood from the lungs and ...

The rate of blood flow can be calculated if the volume of
blood flow and the time is known; For example; if 2460 ml of
blood flows through a blood vessel in 4 minutes, the rate of
blood flow = volume of blood / number of minutes = $2460 / 4$
= 615 ml/minute; From this you may be asked to determine
how much blood flows through the same vessel in one hour =

Blood Vessels & Blood | AQA GCSE Biology Revision Notes

The aim should be a peak flow $>75\%$ of best or predicted with a diurnal variability $<25\%$ before discharge (unless agreed otherwise by a respiratory clinician). Follow-up All patients with a peak flow $<50\%$ of best or predicted on admission require prednisolone 40-50 mg/day until recovery with a minimum of five days.
