In Ethnography from the Mission Field: The Hoffmann Collection of Cultural Knowledge Joubert et al. offer a translated and annotated edition of the 24

ethnographic articles by Missionary Carl Hoffmann and his local interlocutors between the years 1913 and 1958.

This book is a collection of 16 papers that focus on what has been learned in two decades of developing and implementing large-scale national textbook programs. The seminar was designed to help participants make sound policy decisions about their own national textbook programs and to facilitate discourse among a wider audience of parties working to improve the quality of education in developing nations. Organized into four parts, the part headings include: (1) The Design and Implementation of Textbook Programs: An Overview; (2) Policy Issues in Textbook Program Development; (3) Provision of Textbooks: Developed Systems and Infant Industries; and (4) The Future: Will New Electronic Media Make the Textbook Obsolete? Many figures and tables are included and several of papers contain a list of references or a bibliography. (DB)

The World Atlas of Language Structures is a book and CD combination displaying the structural properties of the world's languages. Its 142 world maps and numerous regional maps are all in full colour. Each world map shows an average of 400 languages and is accompanied by a fully referenced description. The CD provides an interactive version of the database which allows the user to customize the maps and find and test correlations. The Atlas is an indispensable source of information for linguists, anthropologists, and geographers. It will be especially valuable for typologists, grammatical theorists, historical linguists, and those interested in a particular region. It sets new standards in comparative linguistics. No institution involved in language research can afford to be without it.

With over 50,000 distinct species in sub-Saharan Africa alone, the African continent is endowed with an enormous wealth of plant resources. While more than 25 percent of known species have been used for several centuries in traditional African medicine for the prevention and treatment of diseases, Africa remains a minor player in the global natural products market largely due to lack of practical information. This updated and expanded second edition of the Handbook of African Medicinal Plants provides a comprehensive review of more than 2,000 species of plants employed in indigenous African medicine, with full-color photographs and references from over 1,100 publications. The first part of the book contains a catalog of the plants used as ingredients for the preparation of traditional remedies, including their medicinal uses and the parts of the plant used. This is followed by a pharmacognostical profile of 170 of the major herbs, with a brief description of the diagnostic features of the leaves, flowers, and fruits and monographs with botanical names, common names, synonyms, African names, habitat and distribution, ethnomedicinal uses, chemical constituents, and reported pharmacological activity. The second part of the book provides an introduction to African traditional medicine, outlining African cosmology and beliefs as they relate to healing and the use of herbs, health foods, and medicinal plants. This book presents scientific documentation of the correlation between the observed folk use and demonstrable biological activity, as well as the characterized constituents of the plants.

This book presents a comprehensive, systematic approach to the development of learning strategies.
