Since the things discussed in this book could be dangerous to one's health or freedom in that the police these days generally shoot first and think later, it is only prudent to state for the record "Do not attempt to do any of the things discussed in this book". This book in no way suggests, condones or recommends, implicitly or explicitly, the engaging in violence of any kind against any person, place, or thing ever for any reason. This book does however emphatically suggest that when a patriotic citizen is in direct conflict with a tinhorn puppet regime such as the Inyo County, Nevada regime so clearly is, it is almost unpatriotic not to do all that one can to expose the criminal nature of that regime. In this instance, due to the fact that the Thomas Monroe Trust would ultimately be dragged into any attempt to silence me permanently through direct legal action, the Thomas Monroe Trust ordered their Inyo County government puppets to tolerate the things that I did against them as individuals during the last 10 years thinking that I would eventually run out of steam. Never in a million years did they realize that a book chronicling the entire conflict was being written while the conflict was happening. The characters in this book are very much real and are from the former District Attorney to the judges and police in truth nothing but useful idiots in this titanic struggle between good and evil! What is hanging in the balance is the Thomas Monroe Trust's continued presents in the region manifested as Demington Medical Center. And Demington Medical Center will only continue to exist if the Inyo valley community allows it to!

The normal function of the organism in various stages of activity can be seen as a process of mutual interaction of different regulation mechanisms building up the behaviour of the organism in changing situations and/or ages and/or levels of health or disease. Insights into these very complex relations which steer the action of the organism are particularly important for the study of internal medicine. They can be seen as directly related to the understanding of pathological conditions. Recently, the medical community has focused its interest on the physiology and pathophysiology of events which happen during sleep. Although some information on pathological regulation during sleep was collected in the 1930s, the modern technology of registration methods is required to analyse the phenomena of sleep-related physiological and pathophysiological patterns. It is interesting that the modern research in this field developed from neuropsychiatry and is now expanding into other fields of medicine, although some problems, for instance the Pickwickian syndrome, were also for a long time considered part of the field of internal medicine. It becomes clearer that sleep is not only a neuro-psychiatric phenomenon, but also has profound consequences for other physiological circuits, perhaps even an important role in pathogenesis. Sleep also has profound consequences for internal diseases. This was shown very clearly recently by many groups, although their data have not yet received the attention which they deserve.

Two hundred miles from home, completely on our own, with the easiest work in the world -- I can hardly wait! It has to be the best summer of Victoria Martin's life! She and her best friend, Steffi, are going to be waitresses at Camp Mohaph, and as far as they can see, that means sunbathing, swimming, wild parties,...and boys! Well, that's what they think! In the real world the staff quarters are shacks, her bosses are slavedrivers, and -- typical -- she's sharing a cabin with snobby Dena Joyce. But Torrie can just about handle all that. What she can't handle, however, is the feeling that she's seriously falling for Steffi's boyfriend, Robbie. Even worse, she suspects he feels the same way. Suddenly the best summer of Torrie's life looks like it could become a total nightmare!
