We3 is a free mobile app that privately connects you to the most compatible people around you. We use social science and machine learning to create the best matches possible, exclusively to make new friends (no romantic shenanigans). It was designed to remove the awkwardness of making new friends as an adult, while protecting everyone's privacy.

A powerful tale from the ALL-STAR SUPERMAN team of Grant Morrison and Frank Quitely. Morrison and Quitely deliver the emotional journey of WE3,three house pets weaponized for lethal combat by the government,as they search for -home! and attempt to ward off the shadowy agency that created them. With nervous systems amplified to match their terrifying mechanical exoskeletons, the members of Animal Weapon 3 (WE3) have the firepower of a battalion between them. But they are just the program's prototypes, and now that their testing is complete, they're slated to be permanently decommissioned, causing them to seize their one chance to make a desperate run for freedom. Relentlessly pursued by their makers, the WE3 team must navigate a frightening and confusing world where their instincts and heightened abilities make them as much a threat as those hunting them.

They're the ultimate cyborg assassins; armed with missiles, poison gas, state-of-the-art computer technology and unbreakable exo-skeletons. The government has spent millions to fuse the firepower of a battalion with the nervous systems of a dog named Bandit, a cat named Tinker, and a rabbit named Pirate. As part of a program to replace human soldiers with expendable animals, the U.S. government has transformed three ordinary pets into the ultimate killing machines. But now, those three animals have seized the chance to make a last, desperate run for 'Home.' A run that will turn into a breathless hunt to the death against the might of the entire military/industrial complex. Prepare for adrenaline rushes and flowing tears as the world's deadliest, most misunderstood animals make a spectacular, unforgettable bid for freedom!

Morrison and Quitely continue their unique 'Westernized manga.' A cyborg dog, cat and rabbit tear through everything the military turns against them, only to come face to face with a teeming wave of frenzied, cyber-enhanced rats. And in a bloody battle already filled with considerable cost, the three will make an unforgivable mistake of fatal consequence...

Regeneration, i.e. the replacement of lost body parts by new outgrowths or by remodelling existing tissues, has been studied for centuries. However, in recent years important developments took place in this field too, owing to new sophisticated techniques and to novel theoretical concepts. Advances in Molecular Genetics, Biochemistry, Cell and Neurobiology, Immunology, to mention a few of them, are the main causes of this resurgence of interest in regeneration. As a consequence, more and more meetings and publications are devoted, either exclusively or for a large part, to basic and applied research of regenerative processes. "Regeneration ists" scattered in laboratories all over the world and accustomed to know each other through exchange of reprints - occasionally an encounter in a large conference - tend now to form small groups, even societies and to institutionalize their meetings. Although the critical mass of scientists involved in regeneration research does not seem yet to be reached, for an autonomous development of this sector, regular and frequent meetings of experts appear useful, even necessary. Such a meeting was convened in Saronis, near Athens, Greece, from 19 to 23 September 1988 and sponsored by the NATO Science Committee and the University of Athens. The present volume contains the contributions to this Advanced Research Workshop on "Recent Trends in Regeneration Research". About 50 biologists from different countries, either members of the Alliance or outside it (U.R.S.S., India, Egypt, Switzerland, Sweden) took part, mostly as invited speakers.

The rain forests of West Africa have been designated as one of the world's hotspots of biodiversity. They extend from Ghana to Senegal and are referred to as the Upper Guinean forests. Because of their isolated position, they harbour a large number of rare and endemic animal and plant species.This book focuses on the biodiversity and ecology of these forests. It analyses the factors that give rise to biodiversity and structure tropical plant communities. It also includes an atlas with ecological profiles of rare plant species and large timber species.

Prepare Operational Budgets is for students of the Certificate IV in Accounting and has been specifically developed to meet the requirements of the unit of competency: Prepare Operational Budgets. Content is presented in bite-sized segments to allow learners to access individual parts at their own pace, and detailed mapping to learning outcomes is provided throughout the text. A complete tool for learning and assessment for both students and instructors, the text includes an assessment tool as an appendix, which has been developed and mapped to meet all essential requirements of assessment. An end-of-chapter developing case study task provides students with practical tasks and activities that build on the concepts covered in previous chapters, enabling a scaffolded approach to the application, and holistic understanding of preparing operational budgets using a realistic case study business scenario.

This book explores sustainability within manufacturing enterprises and examines the concepts and principles of this field. It also reviews the quantitative and qualitative tools available for analytic assessment. It presents a new framework for sustainable manufacturing requirements and discusses the implementation of sustainable manufacturing in terms of practices, indicators, and sustainability level assessments. The book also details the important conditions necessary for the conversion of existing traditional plants to ones with more sustainable processes. Chapters explore topics including the assessment of economic sustainability, social sustainability, environmental sustainability, sustainable manufacturing practices, and sustainability optimization. Serving as a reference for engineers, managers, and practitioners involved in manufacturing, this book will also be a valuable resource to students and researchers of industrial engineering, manufacturing engineering, systems engineering, and operations management.

International Review of Cytology presents current advances and comprehensive reviews in cell biology--both plant and animal. Articles address structure and control of gene expression, nucleocytoplasmic interactions, control of cell development and differentiation, and cell transformation and growth. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research. Gene Expression during Amphibian Limb Regeneration The Extracellular Matrix Biochemistry of Volvox The Cell Biology of Basophils Membrane Receptors for Endocytosis in the Renal Proximal Tubule

Exploring image and imagination in conjunction with natural environments, the animal, and the human, this collection of essays turns the ecocritical and ecocompositional gaze upon comic studies. The comic form has a long tradition of representing environmental rhetoric. Through discussions of comics including A.D.: New Orleans After the Deluge, We3, Concrete, and Black Orchid, these essays bring the rich work of ecological criticism into dialogue with the multi-faceted landscape of comics, graphic novels, web-comics, cartoons, and animation. The contributors ask not only how nature and environment are portrayed in these texts but also how these textual forms inform how we come to know nature and environment--or what we understand those terms to represent. Interdisciplinary in approach, this collection welcomes diverse approaches that integrate not only ecocriticism and comics studies, but animal studies, posthumanism, ecofeminism, queer ecology, semiotics, visual rhetoric and communication, ecoseeing, image-text studies, space and spatial theories, writing studies, media ecology, ecomedia, and other methodological approaches.
