The centerpiece of a typical temple in the ancient world was a statue of a god. The tabernacle (????), which is first described in Parashat Terumah, is different in that it does not have such a statue. What it does have are two golden statues of cherubim (?????) who spread their wings over the kapporet, the lid of the ark of the testimony (Exodus 25:18–20 ? 37:7–9).

The Loch Ness Monster is said to be a creature inhabiting Loch Ness, the largest lake by volume in the British Isles. Some believe it is the last of a dinosaur species that was thought to be extinct long ago. Of course, other creatures get along with people and live among ordinary citizens. Werewolves are a great example of this.

Anyway, this comment is by no means intended to deride the ISFP as I would have gotten a laugh out of any MBTI type on which the panda would have landed. I sincerely hope there were at least some laughs. I'd love to hear anybody else's negative stereotypes on the other animals for the sake of giggles.

The renowned philosopher and political theorist presents a summation of his influential work in this series of Columbia University lectures. A pioneer in the fields of modern linguistics and cognitive science, Noam Chomsky is also one of the most avidly read political theorist of our time. In this series of lectures, Chomsky presents more than half a century of philosophical reflection on all three of these areas. In precise yet accessible language, Chomsky elaborates on the scientific study of language, sketching how his own work has implications for the origins of language, the close relations that language bears to thought, its eventual biological basis. He expounds and criticizes many alternative theories, such as those that emphasize the social, the communicative, and the referential aspects of language. He also investigates the apparent scope and limits of human cognitive capacities. Moving from language and mind to society and politics, Chomsky concludes with a philosophical defense of a position he describes as "libertarian socialism," tracing its links to anarchism and the ideas of John Dewey, and even briefly to the ideas of Karl Marx and John Stuart Mill. Demonstrating its conceptual growth out of our historical past, he also shows its urgent relation to our present moment.

In a world where we usually measure animals by human standards, prize-winning author and MacArthur Fellow Carl Safina takes us inside their lives and minds, witnessing their profound capacity for perception, thought and emotion, showing why the word "it" is often inappropriate as we discover who they really are. Weaving decades of observations of actual families of free-living creatures with new discoveries about brain functioning, Carl Safina's narrative breaches many commonly held boundaries between humans and other animals. In *Beyond Words*, readers travel the wilds of Africa to visit some of the last great elephant gatherings, then follow wolves of Yellowstone National Park sort out the aftermath of their personal tragedy, then plunge into the astonishingly peaceful society of killer whales living in waters of the Pacific Northwest. We spend quality time, too, with dogs and falcons and ravens; and consider how the human mind originated. In his wise and passionate new book, Safina delivers a graceful examination of how animals truly think and feel, which calls to question what really does—and what should—make us human.

How our ability to learn from each other has been the essential ingredient to our remarkable success as a species Human beings have evolved to become the most dominant species on Earth. This astonishing transformation is usually explained in terms of cognitive ability—people are just smarter than all the rest. But Robert Boyd argues that culture—our ability to learn from each other—has been the essential ingredient of our remarkable success. He shows how a unique combination of cultural adaptation and

large-scale cooperation has transformed our species and assured our survival—making us the different kind of animal we are today. Based on the Tanner Lectures delivered at Princeton University, *A Different Kind of Animal* features challenging responses by biologist H. Allen Orr, philosopher Kim Sterelny, economist Paul Seabright, and evolutionary anthropologist Ruth Mace, as well as an introduction by Stephen Macedo.

A Belletrist Book Club Selection “Van Meter’s debut is an unwavering triumph . . . A coming-of-age that’s as human as it is wild.” —The New York Times Book Review On the eve of Evangeline’s wedding, on the shore of Winter Island, a dead whale is trapped in the harbor, the groom may be lost at sea, and Evie’s mostly absent mother has shown up out of the blue. From there, in this mesmerizing, provocative debut, the narrative flows back and forth through time as Evie reckons with her complicated upbringing in this lush, wild land off the coast of Southern California. Evie grew up with her well-meaning but negligent father, surviving on the money he made dealing the island’s world-famous strain of weed, *Winter Wonderland*. Although her father raised her with a deep respect for the elements, the sea, and the creatures living within it, he also left her to parent herself. With wit, love, and bracing flashes of anger, *Creatures* probes the complexities of love and abandonment, guilt and forgiveness, betrayal and grief—and the ways in which our childhoods can threaten our ability to love if we are not brave enough to conquer the past. Lyrical, darkly funny, and ultimately cathartic, *Creatures* exerts a pull as strong as the tides.

In the air, on the ground, and in the water, incredible tiny creatures are all around us! They may be small, but they live remarkable lives. *The Book of Tiny Creatures* introduces young learners to spiders,

When fires ripped across the west not one newscaster from one station mentioned the loss of millions of wild animals, of rabbits and mice and elk and deer, and owls and eagle's perches, of bats and bugs and snails and mink and weasels and all kinds of little birds which nest in trees. Rents throughout the west have gone up 400% in the past few years. If you don't program computers or build apps, you can forget finding a place. A group of mostly young, but not all, people decide to start a non-profit whose mission it is to remind people of our need to protect and look out for not just domestic creatures, but wild animals and places as well. The vehicle they choose to spread their message is a caravan of cars pulled by trailers of all kinds, some with sinks and kitchens and toilets and some old-fashioned, and some modern. "Gas is cheaper than rent," says one of their bumper sticker. This group of like-minded people go up and down the west coast putting on a be nice to animals Circus. environment. No, there are a few dogs who travel with the circus. And a pair of Alpaca show up for one show. And there's a trailer full of cats and a beautiful, complicated, multi-ethnic group of characters pitching in and doing their part. There's a love story, and a story of a positive, forward-looking, proactive people taking measures to fight back against apathy and sloth. Environmentalists of all stripes will enjoy this read, as will anyone who loves animals, the book was written for you, for all of us, to remind ourselves that it's not too late. It's close, but it's not over until it's over.

In *Trash Animals*, a diverse group of environmental writers explore the natural history of wildlife species deemed filthy, invasive, or worthless, highlighting the vexed relationship humans have with such creatures. Each essay focuses on a so-called trash species—gulls, coyotes, carp, and magpies, among others—examining the biology and behavior of each in contrast to the assumptions widely held about them.

"An informative introduction to nature's scariest creatures, exploring why some animals are considered 'monsters.'"--
